Ref:LiquiFuelRecordAppIntro

Good day Sir,

I have attached a pdf document for your information.

The App is very simple do use and can be used on multiple phones in the same company.

To start with you will need to;

1. Prepare your information, such as your bulk tank details, vehicles and required accounts and users.
2. Download the App to any Android mobile 6.0 + (The APK file can be sent to you by email or for ease of use it can be sent via WhatsApp to the mobile number you specify.)
3. Create a new account to sign in.
4. Verify the company email by clicking the link provided on the verification email sent to you on creation of an account. Please note the verification request is time sensitive and will expire after 48Hrs.
5. Once the company email is verified you can login to the App.
6. Once logged in, proceed to the profile screen and enter the current bulk tank details, (including Bulk tank maximum Volume, the Bulk tank opening Balance, and accumulated Bulk tank current running balance.) You will need your current dip level of your bulk tank for current level, your maximum tank volume from your tank specifications and your current Accumulated flow total from your flow meter clock readout.
7. *Please have your current bulk tank balance, accumulated bulk tank reading and maximum volume of bulk tank ready before you start the installation process.*
8. You are now ready to add new users, vehicles and allocation accounts.
9. Use the + icon to add the new users, vehicles and allocation accounts. In each case use the save,  (Disc icon) to save your entry. Once you have added a user, you can move to the vehicle screen by selecting your newly added user. Again, the same process applies, add a new vehicle by selecting the + icon. Save your new vehicle by pressing the save  (Disc icon). You can move onto adding an allocation account selecting newly added vehicle. The same process of adding and saving the new account applies as for the users and vehicles.
10. Once you have added all your users, vehicles and accounts you are ready to create a transaction. To do so, use the back arrow,  to revert back to the user selection.
11. Once you are back at the user selection screen; create a transaction by
 - a. Select user

Holistic Fuel & Fleet Management Solutions

- b. Select vehicle
- c. Select account allocation
- d. Enter the vehicles current odometer, confirm
- e. Enter the fuel dispensed to the vehicle, confirm
- f. View the transaction details, confirm
- g. View the list of records
- h. Press the menu icon, 3 dots to
 - add fuel to the bulk tank
 - View bulk tank level
 - Proceed to Profile, to continue
 - Logout

12. *Please note bulk tank details that are not entered will be set to the default values. The initial transaction for a newly added vehicle will have a consequential fuel efficiency error as it will be calculated from an initial default odometer reading of 10km.*

Companies that wish to use the app for off-site purposes should use the default bulk tank details provided. These values will not change for off-site transactions.

Please can you provide a mobile number which has Android 6.0+ that the App APK file can be sent to via WhatsApp for installation.

The application can be used for a period of 2 weeks free for you to see the benefits. (Please see prices provided).

The link provided will direct you to secure location where the apk installation file can be also be downloaded.

<https://drive.google.com/file/d/16ojfTyx4pk7AGPaS1ruZr-LatOFd2pOn/view?usp=sharing>

We can also recommend a basic Android mobile version 9.0 that can be obtained from your local Cash Crusaders if you require a device to run the App on. For Companies requiring a printed slip hardcopy of each transaction we can recommend an Android terminal.

If you have any questions, please do not hesitate to ask.

Regards
